DETAILED ACTION

Election/Restrictions

Applicants have amended the claims to include an additional species of pigment (i.e., polycyclic quinone) and have limited the composition to electrophotographic toners and electrophotographic developers. Applicants also request examination of liquid toners as the electrophotographic toners of the invention. Because these additional pigment species are reasonably related to the original election and because the additional search required is not seen as burdensome, the additional polycyclic pigment has been examined and is found to be allowable. The liquid toners have also been examined because they are the only remaining non-elected species. The Finality of the last Office action is withdrawn and prosecution on the merits resumes.

Allowable Subject Matter

The elected invention of a process where the composition is a dry toner and the pigment is an azo pigment is allowable over the art of record. Applicants' statement under section 103(c) is persuasive to overcome the art rejection because US Patent 6,485,558 is no longer available as a competent reference in a section 103(a) rejection. The additional species of the polycyclic pigment is also allowable over the art.

Claim 23 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Objections

Claim 12 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 12 specifies the toner as either liquid or dry but these appear to be the only options for a toner. Claim 12 presents the only options available for the state of the toner and thus has the same scope as claim 1.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 2, 4-16, 18-20, and 22 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification as filed does not disclose the claimed process steps (e.g., homogeneously incorporating, grinding, and classifying as specified) for the production of a liquid toner. The Examiner notes that the current claims method steps were specifically based on the production of a dry toner (See Examples 4-6; discussion in Office action of 28 March 2003 pp. 2-3; response of 27 May 2003 pp. 7-8 & 11-12). A review of the specification does not disclose the currently recited method steps for formation of a liquid toner.

Art Unit: 1756

The generic claim 1 is not allowable because it encompasses the liquid toner as seen in dependent claims 12, 22, and 23.
